ATR6550x

VIDEO/RECORDING SHOTGUN MICROPHONE

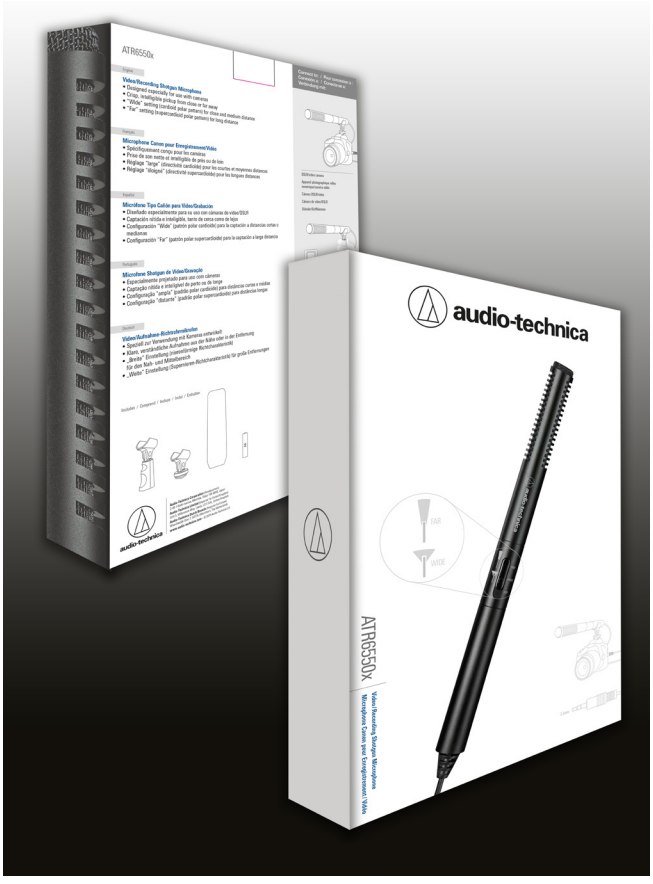

The **ATR6550x** shotgun microphone offers crisp, intelligible pickup from close or far away. A switch on the microphone's body allows you to shift easily between "Wide" and "Far" settings. In the "Wide" setting, which is appropriate for close and medium-range miking, the **ATR6550x** functions as a standard cardioid condenser, focusing pickup on your desired sound source, while blocking noise from the rear and sides. Switching to the "Far" setting causes the polar pattern to narrow to supercardioid, giving you even greater directionality to pick up sound from a distance, while bypassing ambient noise such as traffic, air-handling systems, room reverberation and mechanically coupled vibrations.

Designed especially for use with cameras, the **ATR6550x** comes with a camera shoe mount and has a permanently attached cable that plugs into a camera's 3.5 mm mic input. Additional accessories include a microphone stand clamp, foam windscreen, and AA battery.

- Permanently attached cable with 3.5 mm connector plugs into your camera's mic input
- Two range settings: «Wide» for close and medium distance; «Far» for long distance
- Includes camera mount, stand clamp, foam windscreen, and AA battery
